

Nordic Network of Astrophysics and Cosmology

presented by: Andreas O. Jaunsen (ITA)
PI: Jesper Sollerman (DARK)

<http://www.dark-cosmology.dk/~jesper>

Basis for network

- what is the Universe made of ? (what is dark energy and dark matter ?)
- focus on young active and energetic researchers within the centers (core applicant group are under age 40)
- a strong future science activity requires collaboration, interaction, coordination and inspiration

The network nodes

- DARK Cosmology Centre, Copenhagen; 10 senior researchers and post-docs, 15 PhD-students
- HEAC/AlbaNova, Stockholm; 25 senior researchers and post-docs, 35 PhD-students
- CMA/ITA, Oslo; 9 senior researchers and post-docs and 5 PhD students

Goals for the network

- increase mobility and support interaction among the groups (i.e. student training, guest scheme, sharing external visitors)
- encourage and provide means for younger generation of researchers/students to meet
- create a foundation for long-term relations and develop core-expertise of each group

Thank you...
